THIS PAGE BLANK (USPTO)

SCORE OVER LENGTH SEARCHES

Attached is a score over length search. This search was developed to overcome limitations in most standard search systems which favor large sequences with high scoring, but lesser overall identity over smaller sequences with higher overall identity. This search is especially useful for relatively small nucleic acid or polypeptide target sequences (antisense, fragments, probes, primers, RNAi, epitopes, haptens, etc.) claimed functionally via a form of hybridization and/or identity language and having defined upper and lower polynucleotide and or polypeptide length limits.

The score over length search is performed by first running the query sequence using examiner-specified identity and polynucleotide or protein length limit parameters, and saving 65,000 hits and 0 alignments from each desired database. The resulting output is reformatted using a Microsoft Word macro and is imported into Excel. The summary table data are then sorted by the ratio of score of each hit sequence divided by its length and the accession numbers for all hits below the examiner's desired score over length parameters are deleted. The remaining accession numbers are used to pull the corresponding sequences from the databases into subdatabases enriched for good hits and the query sequence is re-run against these subdatabases to yield the final results.

The score over length cutoff for this search is 75.

Examiner Please Note: This cover sheet should be included when submitting results to be scanned.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 XX
 XX New compound having sequence targeted to nucleic acid encoding inhibitor-
 PT kappa B kinase-gamma, useful for preparing composition for treating e.g.,
 PT cancer, or inflammatory or autoimmune disorder.
 XX
 PS Example 13; Page 74; 106pp; English.
 XX
 XX The invention relates to an antisense compound that is targeted to a
 CC nucleic acid encoding inhibitor-kappa B kinase-gamma, specifically
 CC hybridising to the nucleic acid encoding inhibitor-kappa B kinase-gamma
 CC and inhibiting its expression. Compounds of the invention are antisense
 CC oligonucleotides comprising at least one modified internucleoside
 CC linkage, which is a phosphorothioate linkage, at least one modified sugar
 CC moiety, which is a 2'-O-phethoxyethyl sugar moiety, or at least one
 CC modified nucleobase, which is a 5-methylcytosine. Preferably, the
 CC antisense oligonucleotide is a chimeric oligonucleotide. The compound of
 CC the invention is useful for preparing a composition for treating a

CC hyperproliferative disorder e.g., cancer, or an autoimmune or
 CC inflammatory disorder. The methods are useful for inhibiting the
 CC expression of inhibitor-kappa B kinase-gamma in cells or tissues, and
 CC treating an animal having a disease or condition associated with
 CC inhibitor-kappa B kinase-gamma. The current sequence represents a PCR
 CC probe used in an example from the invention to detect human inhibitor-
 CC kappa B kinase-gamma DNA.

 PS
 XX
 XX The present invention relates to a polypeptides and nucleic acids
 CC encoding four novel splice variant isoforms of human inhibitor of kappa
 CC light polypeptide gene enhancer in B cells, kinase of, I-kappa-B-kinase-
 CC gamma (IKKKG or IKK (I-kappa-B-kinase)-gamma). The invention is useful
 CC for treatment of diseases or conditions associated with aberrant
 CC expression or activity of the IKKKG polypeptide, such as rheumatoid
 CC arthritis, lupus, human immunodeficiency virus (HIV)-acquired
 CC immunodeficiency syndrome (AIDS), influenza, septic shock,
 CC atherosclerosis, oncogenesis and apoptosis. The present sequence is the
 CC human IKKGSv2.1 DNA specific reverse transcription (RT)-PCR primer. This
 CC sequence is used in the exemplification of the invention.

```

XX The present invention describes a double-stranded short interfering
CC nucleic acid (siRNA) that downregulates expression of a target gene, where
CC the siRNA molecule comprises no ribonucleotides and each strand of the
CC double-stranded siRNA comprises about 21 nucleotides. Also described: (1)
CC a siRNA molecule that inhibits expression of target RNA; (2) a siRNA
CC molecule that inhibits replication of a virus and optionally does not
CC require presence of a ribonucleotide for inhibition; (3) a siRNA molecule
CC that inhibits expression of a target gene and does not require presence
CC of a ribonucleotide for inhibition; (4) a siRNA molecule that inhibits
CC expression of a target gene by mediating RNA interference; and (5) a
CC method for modulating expression of a gene in a cell using siRNA
CC molecules. siRNA's can have virucide, anti-HIV, hepatotropic,
CC antiinflammatory, plant antiviral, vasotropic, neuroprotective,
CC cytosstatic, cardiovascular, immunosuppressive, respiratory, nephrotropic
CC and endocrine activities. The siRNA's are useful for downregulating
CC expression of target genes, inhibiting expression of target RNA, and
CC inhibiting replication of a virus. siRNA molecules can be used: (a) for
CC therapy of any disorder that responds to modulation of gene expression,
CC especially animal and plant viral infections, specifically hepatitis B or
CC C; HIV; herpes simplex; cytomegalovirus; human papilloma; respiratory
CC syncytial or influenza viruses, and also many other diseases such as
CC restenosis, neurodegeneration, cancers, and cardiovascular, neurological,
CC prion, inflammatory, autoimmune, pulmonary, renal, liver, mitochondrial,
CC endocrine or reproductive diseases; and (b) for diagnosis, target
CC validation, genomic discovery, genetic engineering, pharmacogenomics and
CC analysis of gene function. Chemical modification of siRNA molecules
CC improves interfering activity; stability; cellular uptake; binding
CC affinity and/or mediates increased polymerase activity. siRNA may be
CC designed to target many related genes containing a conserved sequence.
CC The present sequence represents a siRNA oligonucleotide sequence, which is
CC used in the exemplification of the present invention.

XX
XX New isolated small interfering RNA (siRNA) polynucleotide useful for
XX treating diseases with aberrant activity of the protein tyrosine
XX phosphatase, such as cancer, autoimmune disease, infection, inflammation,
XX diabetes and obesity.
XX
XX Example 8; SEQ ID NO 721; 392pp; English.
XX
XX This invention describes novel small interfering RNA (siRNA)
XX polynucleotides capable of interfering with expression of a polypeptide
XX having protein-tyrosine-phosphatase (PTP) activity. The products of the
XX invention have cytostatic, immunomodulator, antimicrobial,
XX antiinflammatory, antidiabetic and anorectic activity. The methods and
XX conditions of the present invention are useful for treating diseases or
XX conditions associated with aberrant expression or activity of the protein
XX tyrosine phosphatase, such as cancer, autoimmune diseases, infection,
XX inflammation, diabetes and obesity. This sequence represents a siRNA
XX directed against dual specificity phosphatase (DSP) expression.

XX kappa B kinase-gamma, useful for preparing composition for treating e.g.,
XX cancer, or inflammatory or autoimmune disorder.
XX
XX Example 15; Page 77; 106pp; English.
XX
XX The invention relates to an antisense compound that is targeted to a
XX nucleic acid encoding inhibitor-kappa B kinase-gamma, specifically
XX hybridizing to the nucleic acid encoding inhibitor-kappa B kinase-gamma
XX and inhibiting its expression. Compounds of the invention are antisense
XX oligonucleotides comprising at least one modified internucleoside
XX linkage, which is a 2'-O-methoxyethyl sugar moiety, or at least one
XX modified nucleobase, which is a 5-methylcytosine. Preferably, the
XX antisense oligonucleotide is a chimeric oligonucleotide. The compound of
XX the invention is useful for preparing a composition for treating a
XX hyperproliferative disorder e.g., cancer, or an autoimmune or
XX inflammatory disorder. The methods are useful for inhibiting the
XX expression of inhibitor-kappa B kinase-gamma in cells or tissues, and
XX treating an animal having a disease or condition associated with
XX inhibitor-kappa B kinase-gamma. Sequences given in ADA44713-ADA44790
XX represent antisense oligonucleotides for the inhibition of human
XX inhibitor-kappa B kinase-gamma mRNA levels.

XX New compound having sequence targeted to nucleic acid encoding inhibitor-
PT kappa B kinase-gamma, useful for preparing composition for treating e.g.,
PT cancer, or inflammatory or autoimmune disorder.
XX
XX Claim 3; Page 77; 106pp; English.
XX
XX The invention relates to an antisense compound that is targeted to a
CC nucleic acid encoding inhibitor-kappa B kinase-gamma, specifically
CC hybridizing to the nucleic acid encoding inhibitor-kappa B kinase-gamma
CC and inhibiting its expression. Compounds of the invention are antisense
CC oligonucleotides comprising at least one modified internucleoside
CC linkage, which is a 2'-O-methoxyethyl sugar moiety, or at least one
CC modified nucleobase, which is a 5-methylcytosine. Preferably, the
CC antisense oligonucleotide is a chimeric oligonucleotide. The compound of
CC the invention is useful for preparing a composition for treating a
CC hyperproliferative disorder e.g., cancer, or an autoimmune or
CC inflammatory disorder. The methods are useful for inhibiting the
CC expression of inhibitor-kappa B kinase-gamma in cells or tissues, and
CC treating an animal having a disease or condition associated with
CC inhibitor-kappa B kinase-gamma. Sequences given in ADA44713-ADA44790
CC represent antisense oligonucleotides for the inhibition of human
CC inhibitor-kappa B kinase-gamma mRNA levels.

XX
XX New compound having sequence targeted to nucleic acid encoding inhibitor-
XX kappa B kinase-gamma, useful for preparing composition for treating e.g.,
XX cancer, or inflammatory or autoimmune disorder.
PS Claim 3; Page 77; 106pp; English.
XX
CC The invention relates to an antisense compound that is targeted to a
CC nucleic acid encoding inhibitor-kappa B kinase-gamma, specifically
CC hybridizing to the nucleic acid encoding inhibitor-kappa B kinase-gamma
CC and inhibiting its expression. Compounds of the invention are antisense
CC oligonucleotides comprising at least one modified internucleoside
CC linkage, which is a phosphorothioate linkage, at least one modified sugar
CC moiety, which is a 2'-O-methoxyethyl sugar moiety, or at least one
CC modified nucleobase, which is a 5-methylcytosine. Preferably, the
CC antisense oligonucleotide is a chimeric oligonucleotide. The compound of
CC the invention is useful for preparing a composition for treating a
CC hyperproliferative disorder e.g., cancer, or an autoimmune or
CC inflammatory disorder. The methods are useful for inhibiting the
CC expression of inhibitor-kappa B kinase-gamma in cells or tissues, and
CC treating an animal having a disease or condition associated with
CC inhibitor-kappa B kinase-gamma. Sequences given in ADA44713-ADA44790
CC represent antisense oligonucleotides for the inhibition of human
CC inhibitor-kappa B kinase-gamma mRNA levels.

 XX New compound having sequence targeted to nucleic acid encoding inhibitor-
 PT kappa B kinase-gamma, useful for preparing composition for treating e.g.,
 PT cancer, or inflammatory or autoimmune disorder.
 XX Claim 3; Page 76; 106pp; English.
 XX The invention relates to an antisense compound that is targeted to a
 CC nucleic acid encoding inhibitor-kappa B kinase-gamma, specifically
 CC hybridizing to the nucleic acid encoding inhibitor-kappa B kinase-gamma
 CC and inhibiting its expression. Compounds of the invention are antisense
 CC oligonucleotides comprising at least one modified internucleoside
 CC linkage, which is a phosphorothioate linkage, at least one modified sugar
 CC moiety, which is a 2'-O-methoxyethyl sugar moiety, or at least one
 CC modified nucleobase, which is a 5-methylcytosine. Preferably, the
 CC antisense oligonucleotide is a chimeric oligonucleotide. The compound of
 CC the invention is useful for preparing a composition for treating a
 CC hyperproliferative disorder e.g., cancer, or an autoimmune or
 CC inflammatory disorder. The methods are useful for inhibiting the
 CC expression of inhibitor-kappa B kinase-gamma in cells or tissues, and
 CC treating an animal having a disease or condition associated with
 CC inhibitor-kappa B kinase-gamma. Sequences given in ADA44713-ADA44790
 CC represent antisense oligonucleotides for the inhibition of human
 CC inhibitor-kappa B kinase-gamma mRNA levels.

XX
XX Detection of necrosis factor-kappa B related medical condition in
PT organism, by obtaining sample from the organism, and analyzing the sample
PT for alteration in specified amino acid sequences.
XX
XX Claim 40; Page 25; 44pp; English.
XX
XX The invention relates to a nuclear factor-kappa B (NF-kappa B) related
CC medical condition in an organism being detected by obtaining a sample
CC from the organism, and analyzing the sample for an alteration in a the
CC nuclear factor kappaB essential modifier (NEMO) gene or protein sequence
CC (neither shown in the specification). The alteration results in
CC inactivation of NF-kappa B. Also included are treating or preventing NF-
CC kappa B related medical condition in an organism by administering the
CC NEMO protein to the organism and screening a test organism for a compound
CC for the treatment of NF-kappa B related medical condition (by
CC administering the compound to the organism, and assaying for an
CC improvement in the NF-kappa B related medical condition). The method
CC useful is for detecting NF-kappa B related condition, e.g. incontinentia
CC pigmenti (IP), apoptosis-related disease, immune-system related disease,
CC blood vessel-related disease, skin defect, dental defect, osteopetrosis,
CC ophthalmologic defect, or neurological defect, in an organism, i.e. human
CC including affected individual, carrier individual, or noncarrier
CC individual. The NEMO gene is located on chromosome Xq28, incontinentia
CC pigmenti being an X-linked disorder. Experiments in this study show
CC variations in exon 2, 10, 9 and particularly intron 3 to be linked to
CC familial incontinentia pigmenti The present sequence is a reverse
CC transcriptase (RT)-PCR primer used to amplify the human NEMO cDNA

XX
XX New short interfering nucleic acid containing no ribonucleotides, useful
PT e.g. for treating viral infection, downregulates expression of target
PT gene or RNA.
XX
XX Example 4; Page 135; 204pp; English.
XX
XX The present invention describes a double-stranded short interfering
CC nucleic acid (siNA) that downregulates expression of a target gene, where
CC the siNA molecule comprises no ribonucleotides and each strand of the
CC double-stranded siNA comprises about 21 nucleotides. Also described: (1)
CC a siNA molecule that inhibits expression of target RNA; (2) a siNA
CC molecule that inhibits replication of a virus and optionally does not
CC require presence of a ribonucleotide for inhibition; (3) a siNA molecule
CC that inhibits expression of a target gene and does not require presence
CC of a ribonucleotide for inhibition; (4) a siNA molecule that inhibits
CC expression of a target gene by mediating RNA interference; and (5) a
CC method for modulating expression of a gene in a cell using siNA
CC molecules. siNA's can have virucide, anti-HIV, hepatotropic,
CC antiinflammatory, plant antiviral, vasotropic, neuroprotective,
CC cytostatic, cardiovascular, immunosuppressive, respiratory, nephrotropic
CC and endocrine activities. The siNA's are useful for downregulating
CC expression of target genes, inhibiting expression of target RNA, and
CC inhibiting replication of a virus. siNA molecules can be used: (a) for
CC therapy of any disorder that responds to modulation of gene expression,
CC especially animal and plant viral infections, specifically hepatitis B or
CC C; HIV; herpes simplex; cytomegalovirus; human papilloma; respiratory
CC syncytial or influenza viruses, and also many other diseases such as
CC restdenosis, neurodegeneration, cancers, and cardiovascular, neurological,
CC prion, inflammatory, autoimmune, pulmonary, renal, liver, mitochondrial,
CC endocrine or reproductive diseases; and (b) for diagnosis, target
CC validation, genomic discovery, genetic engineering, pharmacogenomics and
CC analysis of gene function. Chemical modification of siNA molecules
CC improves interfering activity; stability; cellular uptake; binding
CC affinity and/or mediates increased polymerase activity. siNA may be
CC designed to target many related genes containing a conserved sequence.
CC The present sequence represents a siNA oligonucleotide sequence, which is
CC used in the exemplification of the present invention.

PT New double-stranded short interfering nucleic acid molecule, useful for
PT down-regulating the expression of an endogenous mammalian target gene or
PT for treating diseases that respond to modulation of gene expression or
PT activity.
XX
XX Example 24; SEQ ID NO 612; 593pp; English.
XX
XX The invention relates to a double-stranded short interfering nucleic acid
XX (siNA) molecule that down-regulates expression of an endogenous mammalian
XX target gene comprising one or more chemical modifications and each strand
XX of the double-stranded siNA comprises about 21 nucleotides. The siNA of
XX the invention demonstrates antiarteriosclerotic, neuroprotective,
XX nontropic, antiparkinsonian and anticonvulsant activities and may be
XX useful for down-regulating the expression of an endogenous mammalian
XX target gene and therefore in the treatment of any disease or condition
XX that responds to modulation of gene expression or activity in a cell,
XX tissue or organism. The disease or condition may include pulmonary
XX diseases such as restenosis, atherosclerosis, Alzheimer's disease,
XX Parkinson's disease, epilepsy, dementia, Huntington's disease or
XX amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for
XX gene therapy applications. The current sequence is that of the siNA DNA-
XX RNA hybrid of the invention.

XX Detection of necrosis factor-kappa B related medical condition in

PT organism, by obtaining sample from the organism, and analyzing the sample
PT for alteration in specified amino acid sequences.
XX Claim 41; Fig 5; 44pp; English.
XX The invention relates to a nuclear factor-kappa B (NF-kappa B) related
CC medical condition in an organism being detected by obtaining a sample
CC from the organism, and analysing the sample for an alteration in a the
CC nuclear factor kappaB essential modifier (NEMO) gene or protein sequence
CC (neither shown in the specification). The alteration results in
CC inactivation of NF-kappa B. Also included are treating or preventing NF-
CC kappa B related medical condition in an organism by administering the
CC NEMO protein to the organism and screening a test organism for a compound
CC for the treatment of NF-kappa B related medical condition (by
CC administering the compound to the organism, and assaying for an
CC improvement in the NF-kappa B related medical condition). The method
CC useful is for detecting NF-kappa B related condition, e.g. incontinentia
CC pigmenti (IP), apoptosis-related disease, immune-system related disease,
CC blood vessel-related disease, skin defect, dental defect, osteopetrosis,
CC ophthalmologic defect, or neurological defect, in an organism, i.e. human
CC including affected individual, carrier individual, or noncarrier
CC individual. The NEMO gene is located on chromosome Xq28, incontinentia
CC pigmenti being an X-linked disorder. Experiments in this study show
CC variations in exon 2, 10, 9 and particularly intron 3 to be linked to
CC familial incontinentia pigmenti. The present sequence is a mutant region
CC of the human NEMO gene found to be associated with familial incontinentia
CC pigmenti.

XX New isolated small interfering RNA (siRNA) polynucleotide useful for
PT treating diseases with aberrant activity of the protein tyrosine
PT phosphatase, such as cancer, autoimmune disease, infection, inflammation,
PT diabetes and obesity.

XX Disclosure; SEQ ID NO 713; 392pp; English.

XX This invention describes novel small interfering RNA (siRNA)
CC polynucleotides capable of interfering with expression of a polypeptide
CC having protein-tyrosine-phosphatase (PTP) activity. The products of the
CC invention have cytosolic, immunomodulator, antimicrobial,
CC antiinflammatory, antidiabetic and anorectic activity. The methods and

CC compositions of the present invention are useful for treating diseases or
CC conditions associated with aberrant expression or activity of the protein
CC tyrosine phosphatase, such as cancer, autoimmune diseases, infection,
CC inflammation, diabetes and obesity. This sequence represents a siRNA
CC directed against dual specificity phosphatase (DSP) expression.

XX

XX New short interfering nucleic acid containing no ribonucleotides, useful

PT e.g. for treating viral infection, downregulates expression of target

PT gene or RNA.

XX

PS Example 4; Page 135; 204pp; English.

XX The present invention describes a double-stranded short interfering

CC nucleic acid (siNA) that downregulates expression of a target gene, where

CC the siNA molecule comprises no ribonucleotides and each strand of the

CC double-stranded siNA comprises about 21 nucleotides. Also described: (1)

CC a siNA molecule that inhibits expression of target RNA; (2) a siNA

CC molecule that inhibits replication of a virus and optionally does not

CC require presence of a ribonucleotide for inhibition; (3) a siNA molecule

CC that inhibits expression of a target gene and does not require presence

CC of a ribonucleotide for inhibition; (4) a siNA molecule that inhibits

CC expression of a target gene by mediating RNA interference; and (5) a

CC method for modulating expression of a gene in a cell using siNA

CC molecules. siNA's can have virucide, anti-HIV, neuroprotective,

CC antiinflammatory, plant antiviral, vasotropic, hepatotropic,

CC cytosolic, cardiovascular, immunosuppressive, respiratory, nephrotropic

CC and endocrine activities. The siNA's are useful for downregulating

CC expression of target genes, inhibiting expression of target RNA, and

CC inhibiting replication of a virus. siNA molecules can be used: (a) for

CC therapy of any disorder that responds to modulation of gene expression,

CC especially animal and plant viral infections, specifically hepatitis B or

CC C; HIV; herpes simplex; cytomegalovirus; human papilloma; respiratory

CC syncytial or influenza viruses, and also many other diseases such as

CC restenosis, neurodegeneration, cancers, and cardiovascular, neurological,

CC prion, inflammatory, autoimmune, pulmonary, renal, liver, mitochondrial,

CC endocrine or reproductive diseases; and (b) for diagnosis, target

CC validation, genomic discovery, genetic engineering, pharmacogenomics and

CC analysis of gene function. Chemical modification of siNA molecules

CC improves interfering activity; stability; cellular uptake; binding

CC affinity and/or mediates increased polymerase activity. siNA may be

CC designed to target many related genes containing a conserved sequence.

CC The present sequence represents a siNA oligonucleotide sequence, which is

CC used in the exemplification of the present invention.

PS

XX This invention describes novel small interfering RNA (siRNA)

CC polynucleotides capable of interfering with expression of a polypeptide

CC having protein-tyrosine-phosphatase (PTP) activity. The products of the

CC invention have cytostatic, immunomodulator, antimicrobial,

CC antiinflammatory, antidiabetic and anorectic activity. The methods and

CC compositions of the present invention are useful for treating diseases or

CC conditions associated with aberrant expression or activity of the protein

CC tyrosine phosphatase, such as cancer, autoimmune diseases, infection,

CC inflammation, diabetes and obesity. This sequence represents a siRNA

CC directed against dual specificity phosphatase (DSP) expression.

XX New compounds, particularly antisense oligonucleotides targeted to a
XX nucleic acid encoding cyclin-dependent kinase 6, useful for treating
XX cancer, bacterial/viral infection or conditions involving aberrant
XX apoptosis.

XX Disclosure; SEQ ID NO 37; 69pp; English.

XX The invention relates to antisense oligonucleotides targeted to cyclin-
XX dependent kinase 6, and which inhibit the expression of cyclin-dependent
XX kinase 6. The antisense oligonucleotides are useful for treating a
XX disease or condition associated with cyclin-dependent kinase 6, such as a
XX hyperproliferative disorder (e.g. cancer), or conditions arising from
XX bacterial or viral infections, or involving aberrant apoptosis. They are
XX also useful in research and diagnostics for modulating the expression of
XX cyclin-dependent kinase 6. The present sequence represents a cyclin-
XX dependent kinase 6 antisense oligonucleotide. Note: Seqid 15-134 are also
XX used in Tables 1 and 2 (page 30-34) but these sequences do not match
XX seqid 15-134 of the seq list.

XX Novel enzymatic nucleic acid that down-regulates expression of neurite
PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
PT protein kinase PKR genes, for treating cancer and inflammatory disease.
XX
XX Claim 59; SEQ ID NO 1082; 317pp; English.
XX
XX The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human IKK-
CC gamma substrate sequence.

 PT Novel enzymatic nucleic acid that down-regulates expression of neurite
 growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
 protein kinase PKR genes, for treating cancer and inflammatory disease.
 XX
 PS Claim 59; SEQ ID NO 1354; 317pp; English.
 XX
 CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 that down regulate the expression or inhibit the function of a receptor
 for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 IkappaB kinase (IKK) or protein kinase PKR. The nucleic acids of the
 invention are useful for treating: cerebrovascular accident, central
 nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 disease, lupus, multiple sclerosis, transplant/graft rejection,
 ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 nucleic acids of the invention are also useful for down-regulating the
 expression of a target gene and as a diagnostic tool to examine genetic
 drifts and mutations within diseased cells or to detect the presence of a
 target RNA in a cell. The present RNA sequence represents a human IKK-
 gamma substrate sequence.

 XX
 XX Novel enzymatic nucleic acid that down-regulates expression of neurite
 PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
 PT protein kinase PKR genes, for treating cancer and inflammatory disease.
 PT
 XX
 XX Claim 59; SEQ ID NO 1808; 317pp; English.
 PS
 XX The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 CC that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human IKK-
 CC gamma substrate sequence.

XX DR
XX PT Novel enzymatic nucleic acid that down-regulates expression of neurite
XX growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
XX protein kinase PKR genes, for treating cancer and inflammatory disease.
XX
XX Claim 59; SEQ ID NO 1086; 317pp; English.
XX
XX The invention comprises nucleic acids (e.g. antisense oligonucleotides)
XX that down regulate the expression or inhibit the function of a receptor
XX for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
XX IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
XX invention are useful for treating: cerebrovascular accident, central
XX nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
XX lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
XX restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
XX disease, lupus, multiple sclerosis, transplant/graft rejection,
XX ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
XX conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
XX nucleic acids of the invention are also useful for down-regulating the
XX expression of a target gene and as a diagnostic tool to examine genetic
XX drifts and mutations within diseased cells or to detect the presence of a
XX target RNA in a cell. The present RNA sequence represents a human IKK-
XX gamma substrate sequence.

XX
XX Novel enzymatic nucleic acid that down-regulates expression of neurite
PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
PT protein kinase PKR genes, for treating cancer and inflammatory disease.
XX
XX Claim 59; SEQ ID NO 1364; 317pp; English.
PS
XX
XX The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human IKK-
CC gamma substrate sequence.

 CC that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human IKK-
 CC gamma substrate sequence.

XX
PS Claim 59; SEQ ID NO 1835; 317pp; English.
XX
CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human IKK-
CC gamma substrate sequence.

XX
XX Novel enzymatic nucleic acid that down-regulates expression of neurite
XX growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
XX protein kinase PKR genes, for treating cancer and inflammatory disease.
XX
XX Claim 59; SEQ ID NO 1806; 317pp; English.
XX
XX The invention comprises nucleic acids (e.g. antisense oligonucleotides)
XX that down regulate the expression or inhibit the function of a receptor
XX for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
XX IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
XX invention are useful for treating: cerebrovascular accident, central
XX nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
XX lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
XX restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
XX ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
XX conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
XX nucleic acids of the invention are also useful for down-regulating the
XX expression of a target gene and as a diagnostic tool to examine genetic
XX drifts and mutations within diseased cells or to detect the presence of a
XX target RNA in a cell. The present RNA sequence represents a human IKK-
XX gamma substrate sequence.

PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
PT protein kinase PKR genes, for treating cancer and inflammatory disease.
XX
XX Claim 59; SEQ ID NO 2143; 317pp; English.
XX
XX The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human IKK-
CC gamma substrate sequence.

XX
XX Novel enzymatic nucleic acid that down-regulates expression of neurite
PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
PT protein kinase PKR genes, for treating cancer and inflammatory disease.
XX
XX Claim 59; SEQ ID NO 2159; 317pp; English.
XX
XX The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human IKK-
CC gamma substrate sequence.

XX
XX Novel enzymatic nucleic acid that down-regulates expression of neurite
PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
PT protein kinase PKR genes, for treating cancer and inflammatory disease.
XX
XX Claim 59; SEQ ID NO 1428; 317pp; English.
XX
XX The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human IKK-
CC gamma substrate sequence.

DR Novel enzymatic nucleic acid that down-regulates expression of neurite

PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or

PT protein kinase PKR genes, for treating cancer and inflammatory disease.

XX Claim 59; SEQ ID NO 2166; 317pp; English.

XX The invention comprises nucleic acids (e.g. antisense oligonucleotides)

CC that down regulate the expression or inhibit the function of a receptor

CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),

CC IkappaB kinase (IKK) or protein kinase PKR. The nucleic acids of the

CC invention are useful for treating: cerebrovascular accident, central

CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,

CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,

CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune

CC disease, lupus, multiple sclerosis, transplant/graft rejection,

CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic

CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The

CC nucleic acids of the invention are also useful for down-regulating the

CC expression of a target gene and as a diagnostic tool to examine genetic

CC drifts and mutations within diseased cells or to detect the presence of a

CC target RNA in a cell. The present RNA sequence represents a human IKK-

CC gamma substrate sequence.

 PS Claim 59; SEQ ID NO 2231; 317pp; English.
 XX
 CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 CC that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human IKK-
 CC gamma substrate sequence.

CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human IKK-
CC gamma substrate sequence.

XX The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human IKK-
CC gamma substrate sequence.

CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human IKK-
CC gamma substrate sequence.

CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human IKK-
CC gamma substrate sequence.

XX
XX Novel enzymatic nucleic acid that down-regulates expression of neurite
PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
PT protein kinase PKR genes, for treating cancer and inflammatory disease.
XX
PS Claim 59; SEQ ID NO 2236; 317pp; English.
XX
XX The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human IKK-
CC gamma substrate sequence.

XX
CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human IKK-
CC gamma substrate sequence.

 PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
 PT protein kinase PKR genes, for treating cancer and inflammatory disease.
 XX
 PS Claim 59; SEQ ID NO 2118; 317pp; English.
 XX
 CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 CC that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human IKK-
 CC gamma substrate sequence.

 XX
 XX Novel enzymatic nucleic acid that down-regulates expression of neurite
 PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
 PT protein kinase PKR genes, for treating cancer and inflammatory disease.
 XX
 PS Claim 59; SEQ ID NO 1331; 317pp; English.
 XX
 CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 CC that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human IKK-
 CC gamma substrate sequence.

 XX
 PS Claim 59; SEQ ID NO 1776; 317pp; English.
 XX
 CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 CC that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human IKK-
 CC gamma substrate sequence.

XX
XX Claim 59; SEQ ID NO 2021; 317pp; English.
XX
XX The invention comprises nucleic acids (e.g. antisense oligonucleotides)
XX that down regulate the expression or inhibit the function of a receptor
XX for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
XX IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
XX invention are useful for treating: cerebrovascular accident, central
XX nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
XX restenosis or glioma), inflammatory disease (e.g. rheumatoid arthritis,
XX disease, lupus, multiple sclerosis, diabetes, obesity, autoimmune
XX ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
XX conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
XX nucleic acids of the invention are also useful for down-regulating the
XX expression of a target gene and as a diagnostic tool to examine genetic
XX drifts and mutations within diseased cells or to detect the presence of a
XX target RNA in a cell. The present RNA sequence represents a human IKK-
XX gamma substrate sequence.

DR Novel enzymatic nucleic acid that down-regulates expression of neurite

XX growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or

PT protein kinase PKR genes, for treating cancer and inflammatory disease.

XX Claim 59; SEQ ID NO 2170; 317pp; English.

PS The invention comprises nucleic acids (e.g. antisense oligonucleotides)

XX that down regulate the expression or inhibit the function of a receptor

CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),

CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the

CC invention are useful for treating: cerebrovascular accident, central

CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,

CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,

CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune

CC disease, lupus, multiple sclerosis, transplant/graft rejection,

CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic

CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The

CC nucleic acids of the invention are also useful for down-regulating the

CC expression of a target gene and as a diagnostic tool to examine genetic

CC drifts and mutations within diseased cells or to detect the presence of a

CC target RNA in a cell. The present RNA sequence represents a human IKK-

CC gamma substrate sequence.

 DR Novel enzymatic nucleic acid that down-regulates expression of neurite
 PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
 PT protein kinase PKR genes, for treating cancer and inflammatory disease.
 XX Claim 59; SEQ ID NO 1090; 317pp; English.
 PS The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 XX that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human IKK-
 CC gamma substrate sequence.

 DR
 XX Novel enzymatic nucleic acid that down-regulates expression of neurite
 PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
 PT protein kinase PKR genes, for treating cancer and inflammatory disease.
 XX
 PS Claim 59; SEQ ID NO 1756; 317pp; English.
 XX
 CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 CC that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human IKK-
 CC gamma substrate sequence.

 XX
 CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 CC that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human IKK-
 CC gamma substrate sequence.

 PT Novel enzymatic nucleic acid that down-regulates expression of neurite
 PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
 PT protein kinase PKR genes, for treating cancer and inflammatory disease.
 XX
 PS Claim 59; SEQ ID NO 1843; 317pp; English.
 XX
 CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 CC that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human IKK-
 CC gamma substrate sequence.

DR	Novel enzymatic nucleic acid that down-regulates expression of neurite
XX	growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
PT	protein kinase PKR genes, for treating cancer and inflammatory disease.
XX	Claim 59; SEQ ID NO 2179; 317pp; English.
PS	The invention comprises nucleic acids (e.g. antisense oligonucleotides)
XX	that down regulate the expression or inhibit the function of a receptor
CC	for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC	IkappaB kinase (IKK) or protein kinase PKR. The nucleic acids of the
CC	invention are useful for treating: cerebrovascular accident, central
CC	nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC	lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC	restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC	disease, lupus, multiple sclerosis, transplant/graft rejection,
CC	ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC	conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC	nucleic acids of the invention are also useful for down-regulating the
CC	expression of a target gene and as a diagnostic tool to examine genetic
CC	drifts and mutations within diseased cells or to detect the presence of a
CC	target RNA in a cell. The present RNA sequence represents a human IKK-
CC	gamma substrate sequence.

PT Novel enzymatic nucleic acid that down-regulates expression of neurite
PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
PT protein kinase PKR genes, for treating cancer and inflammatory disease.
XX
PS Claim 59; SEQ ID NO 1328; 317pp; English.
XX
CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human IKK-
CC gamma substrate sequence.

PT Novel enzymatic nucleic acid that down-regulates expression of neurite
PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
PT protein kinase PKR genes, for treating cancer and inflammatory disease.
XX
PS Claim 59; SEQ ID NO 1820; 317pp; English.
XX
CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human IKK-
CC gamma substrate sequence.

 DR
 XX Novel enzymatic nucleic acid that down-regulates expression of neurite
 PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
 PT protein kinase PKR genes, for treating cancer and inflammatory disease.
 XX
 PS Claim 59; SEQ ID NO 1054; 317pp; English.
 XX
 CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 CC that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection, and allergic
 CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human IKK-
 CC gamma substrate sequence.

 DR
 XX Novel enzymatic nucleic acid that down-regulates expression of neurite
 PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
 PT protein kinase PKR genes, for treating cancer and inflammatory disease.
 XX
 PS Claim 59; SEQ ID NO 1351; 317pp; English.
 XX
 CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 CC that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human IKK-
 CC gamma substrate sequence.

 XX
 PT Novel enzymatic nucleic acid that down-regulates expression of neurite
 PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
 PT protein kinase PKR genes, for treating cancer and inflammatory disease.
 XX
 PS Claim 59; SEQ ID NO 1787; 317pp; English.
 XX
 CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 CC that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human IKK-
 CC gamma substrate sequence.

PS Claim 59; SEQ ID NO 2115; 317pp; English.
XX
XX
CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK) or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human IKK-
CC gamma substrate sequence.

 DR
 PT Novel enzymatic nucleic acid that down-regulates expression of neurite
 PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
 PT protein kinase PKR genes, for treating cancer and inflammatory disease.
 XX
 PS Claim 59; SEQ ID NO 2237; 317pp; English.
 XX
 CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 CC that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human IKK-
 CC gamma substrate sequence.

PI WPI; 2003-058513/05.

DR Novel enzymatic nucleic acid that down-regulates expression of neurite

XX growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or

PT protein kinase PKR genes, for treating cancer and inflammatory disease.

XX Claim 59; SEQ ID NO 1303; 317pp; English.

XX The invention comprises nucleic acids (e.g. antisense oligonucleotides)

CC that down regulate the expression or inhibit the function of a receptor

CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),

CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the

CC invention are useful for treating: cerebrovascular accident, central

CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,

CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,

CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune

CC disease, lupus, multiple sclerosis, transplant/graft rejection,

CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic

CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The

CC nucleic acids of the invention are also useful for down-regulating the

CC expression of a target gene and as a diagnostic tool to examine genetic

CC drifts and mutations within diseased cells or to detect the presence of a

CC target RNA in a cell. The present RNA sequence represents a human IKK-

CC gamma substrate sequence.

XX DR
XX PT Novel enzymatic nucleic acid that down-regulates expression of neurite
PT growth inhibitor receptor, prostaglandin D2 receptor. IkappaB kinase or
PT protein kinase PKR genes, for treating cancer and inflammatory disease.
XX
XX PS Claim 59; SEQ ID NO 1399; 317pp; English.
XX
XX CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human IKK-
XX gamma substrate sequence.

XX protein kinase PKR genes, for treating cancer and inflammatory disease.
XX
XX Claim 59; SEQ ID NO 2026; 317pp; English.
XX
XX The invention comprises nucleic acids (e.g. antisense oligonucleotides)
XX that down regulate the expression or inhibit the function of a receptor
XX for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
XX IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
XX invention are useful for treating: cerebrovascular accident, central
XX nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
XX lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
XX restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
XX disease, lupus, multiple sclerosis, transplant/graft rejection,
XX ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
XX conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
XX nucleic acids of the invention are also useful for down-regulating the
XX expression of a target gene and as a diagnostic tool to examine genetic
XX drifts and mutations within diseased cells or to detect the presence of a
XX target RNA in a cell. The present RNA sequence represents a human IKK-
XX gamma substrate sequence.

CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK) or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human IKK-
CC gamma substrate sequence.

 PT Novel enzymatic nucleic acid that down-regulates expression of neurite
 PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
 PT protein kinase PKR genes, for treating cancer and inflammatory disease.
 XX
 PS Claim 59; SEQ ID NO 1387; 317pp; English.
 XX
 CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 CC that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human IKK-
 CC gamma substrate sequence.

 PT Novel enzymatic nucleic acid that down-regulates expression of neurite
 growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
 protein kinase PKR genes, for treating cancer and inflammatory disease.
 XX
 PS Claim 59; SEQ ID NO 1811; 317pp; English.
 XX
 CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 that down regulate the expression or inhibit the function of a receptor
 for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human IKK-
 CC gamma substrate sequence.

XX
XX Novel enzymatic nucleic acid that down-regulates expression of neurite
XX growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
XX protein kinase PKR genes, for treating cancer and inflammatory disease.
XX
XX Claim 59; SEQ ID NO 2241; 317pp; English.
XX
XX The invention comprises nucleic acids (e.g. antisense oligonucleotides)
XX that down regulate the expression or inhibit the function of a receptor
XX for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
XX IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
XX invention are useful for treating: cerebrovascular accident, central
XX nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
XX lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
XX restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
XX disease, lupus, multiple sclerosis, transplant/graft rejection,
XX ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
XX conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
XX nucleic acids of the invention are also useful for down-regulating the
XX expression of a target gene and as a diagnostic tool to examine genetic
XX drifts and mutations within diseased cells or to detect the presence of a
XX target RNA in a cell. The present RNA sequence represents a human IKK-
XX gamma substrate sequence.

DR
XX
XX Permentative production of sulfur-containing compounds, particularly L-
XX methionine, useful as feed additives, by using Coryneform bacteria that
XX overexpress methionine synthase.
XX
XX Example 7; SEQ ID NO 73; 304pp; German.
XX
XX This invention describes a novel method for the fermentative production
XX of methionine by growing a sulphur-producing Coryneform bacteria that
XX expresses at least one heterologous nucleic acid encoding a protein with
XX methionine synthase (Meth) activity. Methionine accumulates in the medium
XX or the cells. The method can be used to produce an L-methionine-
XX containing animal feed additive by culturing an L-Met-producing
XX microorganism, removing water from the resulting broth, removing 0-100%
XX of the biomass formed and drying the product to produce the feed additive
XX in powdered or granular form. The nucleic acid encoding Meth has sequence
XX homology less than 100% with respect to the meth coding sequence of
XX Corynebacterium glutamicum ATCC 13032. Optionally at least one other gene
XX in the methionine biosynthesis pathway (e.g. aspartate kinase,
XX glyceraldehyde-3-phosphate dehydrogenase or 3-phosphoglycerate kinase) is
XX also amplified or mutated so that it is not affected by metabolites. Also
XX at least one metabolic pathway that reduces production of methionine is
XX at least partly switched off (e.g. homoserine kinase, threonine
XX dehydratase or threonine synthase). The method is especially used to
XX produce L-methionine, useful as an additive for animal feeds. More
XX generally sulphur-containing fine chemicals are useful in human and
XX animal nutrition, cosmetics and pharmaceuticals. This sequence represents
XX a PCR primer used to amplify the S. coelicolor meth gene for inclusion
XX into the construct pCPhsdh meth_Sc.

 DR Pharmaceutical composition for treating ailments associated with impaired
 PT respiration, has oligo(s) antisense to specific gene(s) or its
 PT corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
 PT ubiquinone.
 XX Disclosure; SEQ ID NO 7359; 872pp; English.
 PS The invention relates to a novel pharmaceutical composition, which has a
 CC first active agent comprising an oligonucleotide antisense to the
 CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
 CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
 CC junctions of genes encoding a polypeptide associated with lung and/or
 CC nasal airway dysfunction and a second active agent comprising an
 CC antiinflammatory steroid and ubiquinone. A composition of the invention
 CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
 CC immunosuppressive, and cytostatic activity. The composition may have a
 CC use in antisense gene therapy. The composition is useful for treating or
 CC preventing a respiratory, lung or malignant disease or condition, also
 CC for enhancing the prophylactic or therapeutic respiratory effect of an
 CC antiinflammatory steroid in a subject, for reducing or depleting levels
 CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
 CC receptor, producing bronchodilation, increasing levels of ubiquinone or
 CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
 CC lung inflammation, lung allergies, or a respiratory disease or condition.
 CC Note: The sequence data for this patent is not represented in the printed
 CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/published_pct_sequences

 DR Pharmaceutical composition for treating asthma, has antisense
 PT oligonucleotide containing less percentage of adenosine, targeted to
 PT nucleic acids associated with lung airway or lung dysfunction, and
 PT bronchodilating agent.
 XX Claim 15; SEQ ID NO 7359; 763pp; English.
 PS This invention describes a novel composition (a) a first active agent,
 CC comprising oligonucleotides, effective for alleviating
 CC bronchoconstriction, respiratory tract inflammation, allergies and
 CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
 CC surfactant depletion or hyposecretion, when administered to a mammal. The
 CC oligonucleotides are derived from a gene encoding or regulating
 CC expression of a target polypeptide associated with lung airway or lung
 CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
 CC The invention also describes a kit, that comprises: (a) a delivery
 CC device, in separate containers, (b) the oligonucleotides, (c)
 CC instructions for adding a carrier and for use of the kit. The composition
 CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
 CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
 CC beta-adrenergic agonist. The composition is useful for preventing or
 CC treating a respiratory, lung or malignant disease. The administered
 CC composition comprises oligo and is administered to reduce the production
 CC or availability, or to increase the degradation of the target mRNA or to
 CC reduce the amount of target polypeptide present in the lungs. The
 CC pulmonary obstruction, and/or bronchoconstriction and/or lung
 CC inflammation, allergies and/or surfactant hypoproduction are associated
 CC with a disease or condition such as pulmonary vasoconstriction,
 CC inflammation, allergies, asthma, impeded respiration, respiratory
 CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
 CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
 CC transplantation rejection, pulmonary infections, bronchitis or cancer.
 CC The reduced adenosine content of the anti-sense oligos corresponding to
 CC thymidines present in the target RNA serves to prevent the breakdown of
 CC the oligonucleotides into products that free adenosine into the system
 CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
 CC prevent any unwanted effects due to it

 Microsatellite markers derived from the genome of rye, useful for genetic
 mapping as markers of monogenic or polygenic traits.
 Claim 6; Page 19; 28pp; German.
 This invention describes Secale cereale microsatellite markers based on
 hypervariable genomic segments of Secale cereale and plants of the tribes
 Triticeae and Poae. The microsatellite markers comprise a simple
 sequence repeat (SSR) marker as sequence tag site (STS), defined by two
 specific S. cereale defined primers, of mean length 18-26 bases and
 flanking the microsatellite sequence (MSS). Such markers are useful for
 genetic analysis of rye, triticale and other species of the tribes
 Triticeae and Poae, e.g. for DNA fingerprinting; identification of
 varieties; detecting self or cross fertilization; studying similarity and
 relatedness; characterization of cytological lines, or generally any sort
 of gene mapping. Particularly, they are useful for genetic mapping and
 marking of mono- or poly-genic traits, selection and evaluation of
 varietal purity or checking culture stages (particularly in hybrid
 culture methods), purity of propagative materials, success of self-
 fertilization and required ratio of components in populations and
 hybrids. AAX36902-X36965 represent PCR primers used in the method of the
 invention

 XX
 CC This invention describes novel microsatellite markers (MSM), based on the
 CC hypervariable genomic regions of rye (Secale cereale) and of plants from
 CC the tribes Triticeae and Poae. MSM, which are new genetic markers for
 CC rye and closely related species, are used for genetic analysis and in
 CC breeding programs. Typical applications are in DNA fingerprinting;
 CC identification of varieties; detection of self and cross pollination;
 CC characterization of cytoplasmic lines, and genetic mapping (of mono- or
 CC poly-genic traits). MSM show a higher degree of polymorphism than known
 CC markers (both within and between different rye varieties and lines); can
 CC be detected by polymerase chain reaction, so that even very small samples
 CC may be analyzed, and generate many alleles per marker locus. AA23827-
 CC 223886 represent the microsatellite marker PCR primers described in the

PS
XX
XX The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiqunone. A composition of the invention
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antiinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiqunone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.
CC Note: The sequence data for this patent is not represented in the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

XX
XX Pharmaceutical composition for treating asthma, has antisense
PT oligonucleotide containing less percentage of adenosine, targeted to
PT nucleic acids associated with lung airway or lung dysfunction, and
PT bronchodilating agent.
XX
PS Claim 15; SEQ ID NO 2971; 763pp; English.
XX
XX This invention describes a novel composition (a) a first active agent,
CC comprising oligonucleotides, effective for alleviating
CC bronchoconstriction, respiratory tract inflammation, allergies and
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC oligonucleotides are derived from a gene encoding or regulating
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has anti-allergic, anti-inflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC beta-adrenergic agonist. The composition is useful for preventing or
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The

CC pulmonary obstruction, and/or bronchoconstriction and/or lung
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC with a disease or condition such as pulmonary vasoconstriction,
CC inflammation, allergies, asthma, impeded respiration, respiratory
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC transplantation rejection, pulmonary infections, bronchitis or cancer.
CC The reduced adenosine content of the anti-sense oligos corresponding to
CC thymidines present in the target RNA serves to prevent the breakdown of
CC the oligonucleotides into products that free adenosine into the system
CC e.g., lung, brain, heart, kidney, etc., tissue environment and thereby, to
CC prevent any unwanted effects due to it

XX New lentiviral vector comprising a nucleotide sequence encoding a small
PT interference RNA, useful for reducing expression of a target gene in a
PT cell.
XX
XX Example 1; SEQ ID NO 8; 51pp; English.
XX
XX The present invention describes a lentiviral vector comprising a
CC nucleotide sequence encoding a small interference RNA (siRNA). Also
CC described is a method of reducing expression of a target gene in a cell
CC comprising: (a) introducing into the cell a lentiviral vector encoding a
CC siRNA specific for the gene; and (b) placing the cell under conditions,
CC where the siRNA specific for the gene is expressed to cause a detectable
CC decrease in expression of the gene. The siRNA has cytostatic and virucide
CC activities, and can be used in gene therapy. The vector is useful for
CC reducing expression of a target gene in a cell. The present sequence
CC represents a Sca-2 siRNA duplex oligonucleotide, which is used in an
CC example from the present invention.

AL Allelic variant of serotonin 5HT7 receptor gene - is associated with
PT alcoholic offenders and is useful for screening neuropsychiatric drugs.
XX
PS Example 2; Col 7; 11pp; English.
XX
CC This PCR primer is used for allele specific amplification (ASA) of the
CC allelic variant of the serotonin 5HT7 receptor (5HT7leu). This is used
CC for screening large numbers of samples for 5HT7leu variant. The invention
CC provides a method for detecting DNA that codes for a 5HT7leu allelic
CC variant which comprises amplifying human DNA with primers capable of
CC amplifying a sequence encoding the third intracellular loop of the human
CC 5HT7 gene and determining if the amplified DNA comprises a sequence in
CC which a C-to-T alteration converts a Pro codon to a Leu codon. The
CC 5HT7leu variant and associated DNA and assays provide important
CC investigative tools for both behavioural research and the screening of
CC neuropsychiatric drug candidates

CC New polynucleotides comprising molecular interaction sites of 23S rRNA
CC that have secondary structures, useful for virtual or actual screening of
CC compounds that bind to it, and the modulation of the activity of the 23S
CC rRNA.
XX
Example 3; SEQ ID NO 290; 148pp; English.
XX
CC This invention relates to a novel polynucleotides that comprise molecular
CC interaction sites of 23S rRNA secondary structure. Specifically, it
CC refers to the virtual or actual screening of combinatorial libraries of
CC compounds that can bind to and modulate the activity of 23S rRNA, and as
CC such affect interactions with factors and proteins required for
CC translation and other cellular processes. The present invention describes
CC the identification of molecular interactions. The present invention describes
CC rRNA (and their secondary structures) that can be used as antimicrobial
CC targets for compounds that modulate, inhibit or stimulate prokaryotic
CC cell growth, and thus are useful as novel drugs, agricultural chemicals
CC and industrial chemicals that operate through the modulation of 23S rRNA.
CC This oligonucleotide sequence is a 23S rRNA oligo, a targeted molecular
CC interaction site of the invention.

XX Identification of microorganisms by nucleic acid amplification - using
PT universal primers and comparison of electrophoretic sepn. patterns, esp.
PT for rapid species specific identification of bacteria.
XX
XX Claim 5; Page 31; 34pp; English.
XX
XX The primers AAQ90283-94 are used in a PCR amplification method for the
CC detection of microorganisms esp. bacteria, but also for viruses, fungi,
CC actinomycetes, unicellular parasites, etc. The primers are based on the
CC sequences of the 16S and 23S rRNA genes but can also include other
CC species and gene specific primers. This primer corresponds to bases 1041-
CC 60 of the 16S rRNA gene. The primers can be labelled for ease of
CC detection by e.g. fluorescein isothiocyanate (FITC). The amplification
CC products are converted to a single strand form and separated by gel
CC electrophoresis, based on sequence-dependent differences in mobility
CC (SDDM) of the single stranded DNA or RNA. The band pattern generated by
CC the electrophoresis can be used to identify the species or strain of
CC microorganism when compared to a set of electrophoresis patterns for
CC known microorganisms

PT angiogenesis.
PT
```

XX Example 5; Col 12; 16pp; English.

XX The present sequence represents an antisense oligonucleotides which is

XX targeted to vascular endothelial growth factor (VEGF) RNA. While the

XX present oligonucleotide did not inhibit VEGF protein production, other

XX antisense oligonucleotides (see ABQ78459-62 and ABQ78467-69) did. VEGF,

XX also known as vascular permeability factor (VPF), has been shown to play

XX an integral role in abnormal angiogenesis associated with a variety of

XX pathological states. These antisense oligonucleotides are useful in the

XX treatment of pathological states in which VEGF expression plays a role,

XX especially angiogenic disorders, e.g. diabetic retinopathy,

XX atherosclerotic plaque formation, wound healing and tumour angiogenesis.

XX Inhibition of VEGF expression by antisense oligonucleotide technology

XX will also be useful in determining the role of this cytokine in processes

XX where angiogenesis is involved. In vitro systems which mimic blood vessel

XX formation/permeability have been developed. The role of VEGF in these

XX systems can be determined using antisense oligonucleotides

PT Determining presence of bacteria or fungus-yeast RNA in sample involves

PT carrying out reverse transcriptase-PCR reaction of fungus-yeast RNA and

PT treating amplified DNA with probes which hybridize to amplified DNA.

XX

PS Claim 1; SEQ ID NO 15; 31pp; English.

XX

CC This invention relates to a novel method for one step real-time RT-PCR

CC kits useful for the detection of microorganisms occurring within

CC industrial products such as pharmaceuticals, cosmetic and non-clinical

CC samples. Specifically, it refers to determining the presence of bacteria

CC or fungus-yeast RNA in a sample suspected of containing such

CC contaminants. The present invention describes oligonucleotide primers and

CC probes that are natural nucleic acid or peptide nucleic acid (PNA)

CC molecules that can hybridize to the target nucleic acid (DNA and RNA).

CC Accordingly, the method enables rapid and simultaneous detection and

CC quantification of RNA from bacteria and fungus-yeast in either sterile or

CC non-sterile products in less than 24 hours. Furthermore, the one step

CC process reduces the risk of environmental contamination that could occur

CC when the reaction tubes are opened during the PCR procedure. This

CC oligonucleotide sequence is a PCR primer used in one-step real time RT-

CC PCR to amplify bacteria and fungus-yeast RNA, given in an exemplification

CC of the invention.

XX

New cells recombinantly altered to express an exogenous AK155 cytokine receptor, useful for identifying agents for treating AK155-mediated diseases, e.g. inflammation, angiogenesis or cancer.

XX Example 2; Page 51; 100pp; English.

XX The present invention relates to a cell recombinantly altered to express

CC an exogenous AK155 cytokine receptor comprising alpha and beta subunits.

CC The cytokine receptor, when expressed in Ba/F3 cells, binds to AK155 and

CC stimulates binding of STAT3 to interferon (IFN) gamma-activated

CC sequences. The cell is useful in expressing AK155 cytokine receptor which

CC may be used for identifying therapeutic agents useful for treating AK155-

CC mediated conditions or diseases, such as inflammation (e.g. Crohn's

CC disease), autoimmune diseases (e.g. multiple sclerosis, rheumatoid

CC arthritis, psoriasis, asthma, allergies, diabetes mellitus, Sjogren's

CC syndrome), transplant rejection, angiogenesis, and cancer. The current

XX sequence represents an IL-10 forward primer sequence

PT New pharmaceutical composition comprising a nucleic acid molecule of the

PT malic enzyme, ABC50, VhaPp1-1, Sec61 alpha, glutathione S-transferase 2,

PT Rab-Rp1, F-box protein Lilina/FBL7, useful treating e.g., obesity.

XX Example 4; Page 73; 158pp; English.

XX

CC The present invention describes a pharmaceutical composition comprising a

CC nucleic acid molecule of the malic enzyme (Men), F-box, ABC50, VhaPp1-1,

CC vacuolar ATPase, Sec61 alpha or glutathione S-transferase 2 (GST2) gene

CC family, Rab-Rp1 family of proteins, cysteine string protein (Csp) family

CC of proteins, F-box protein Lilina/FBL7, coronin family of actin-

CC associated proteins, or other polypeptides and a carrier. Also described:

CC (1) a non-human transgenic animal exhibiting a modified expression of the

CC polypeptide; (2) a recombinant host cell exhibiting the modified

CC expression of the homologous polypeptide; (3) a method of identifying a

CC polypeptide involved in regulation of the energy homeostasis and/or the

CC metabolism of triglycerides in a mammal; and (4) a method for screening

CC for an agent that modulates the activity of the homologous polypeptide or

CC interaction of the homologous polypeptide with a binding target/agent.

CC The pharmaceutical composition has anorectic, antidiabetic, hypotensive,

CC cardiant, antiinflammatory and cytostatic activities, and can be used in

CC gene therapy. The pharmaceutical composition is useful for preparing a

CC composition for diagnosing or treating, evaluating treatment of obesity,

CC eating disorders, cachexia, diabetes mellitus, hypertension, coronary

CC heart disease, hypercholesterolaemia, dyslipidaemia, osteoarthritis,

CC gallstones, cancer or sleep apnea. The present sequence is used in the

CC exemplification of the present invention

PT New virus suppressing factor protein having antiviral activity produced

PT in immune cell stimulated by encephalomyocarditis virus variant, useful

PT for suppressing proliferation or replication of virus e.g. herpes virus.

XX Example 4; Page 22; 95pp; English.

XX The invention relates to a virus suppressing factor (VSF) protein
 CC increasingly produced in an immune cell stimulated by
 CC encephalomyocarditis virus variant. The protein has antiviral activity
 CC unchanged by immunoprecipitation and immunoneutralisation, is inactivated
 CC by proteinase K, is not chosen from antiviral cytokines. The invention is
 CC useful for preventing or treating viral infections by administering the
 CC protein to a subject suffering from a viral infection. The invention has
 CC antiviral activity which is to suppress proliferation or replication of a
 CC virus belonging to Orthomyxoviridae, Picornaviridae, Retroviridae or
 CC Herpes. The present sequence is a RT-PCR primer used in the amplification
 CC of cytokines of the invention

 DR New lentiviral vector comprising a nucleotide sequence encoding a small
 PT interference RNA, useful for reducing expression of a target gene in a
 PT cell.
 XX Example 1; SEQ ID NO 44; 51pp; English.
 The present invention describes a lentiviral vector comprising a
 CC nucleotide sequence encoding a small interference RNA (siRNA). Also
 CC described is a method of reducing expression of a target gene in a cell
 CC comprising: (a) introducing into the cell a lentiviral vector encoding a
 CC siRNA specific for the gene; and (b) placing the cell under conditions,
 CC where the siRNA specific for the gene is expressed to cause a detectable
 CC decrease in expression of the gene. The siRNA has cytostatic and virucide
 CC activities, and can be used in gene therapy. The vector is useful for
 CC reducing expression of a target gene in a cell. The present sequence
 CC represents a mouse Sca-2 target oligonucleotide, which is used in an
 CC example from the present invention.

 XX
 CC The present invention describes a human genome-derived myosin-like
 CC protein 1 (hGDMPLP-1). The protein and polynucleotide sequences of hGDMPLP-
 CC 1 can be used in gene therapy and vaccine production. The hGDMPLP-1
 CC nucleic acids can be used as probes to detect, characterise and quantify
 CC hGDMPLP-1 nucleic acids in samples, as amplification substrates, to
 CC provide initial substrates for the recombinant engineering of hGDMPLP-1
 CC protein variants having desired phenotypic improvements, and for
 CC expressing the proteins. The hGDMPLP-1 proteins or polypeptides may be
 CC used as immunogens to raise antibodies that specifically recognise hGDMPLP
 CC -1 proteins, as standards in assays used to determine the concentration
 CC and/or amount specifically of hGDMPLP proteins, as specific biomolecule
 CC capture probes for surface-enhanced laser desorption/ionisation, as
 CC therapeutic supplement in patients having specific deficiency in hGDMPLP-1
 CC production, and in vaccines or for replacement therapy. The
 CC polynucleotide sequences encoding hGDMPLP-1 may be used for diagnosing a
 CC disorder associated with the expression of hGDMPLP-1, in particular heart
 CC and skeletal muscle disorders. hGDMPLP-1 is localised to chromosome 22.
 CC The present sequence represents an oligomer used in the screening of the
 CC hGDMPLP-1 sequence in the exemplification of the present invention. N.B.
 CC The sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from WIPO

PT New isolated NOVX polypeptides useful for treating, preventing and
 PT diagnosing pathological conditions with NOVX-associated disorders, such
 PT as cancer, obesity, diabetes and inflammatory or CNS diseases.
 XX Example D; SEQ ID NO 336; 418pp; English.
 XX The invention relates to a new isolated polypeptide (designated NOVX)
 CC comprising one of 141 fully defined sequences, their mature forms, a
 CC protein comprising one or more conservative substitutions or having at
 CC least 95% identity to one of the 141 proteins. Also included are a
 CC composition comprising NOVX (or a NOVX nucleic acid molecule (NA)), a kit
 CC comprising the composition of NOVX in one or more containers, an isolated
 CC nucleic acid molecule encoding a NOVX protein, producing NOVX (comprising
 CC culturing a cell under conditions that lead to expression of the
 CC polypeptide, where the cell comprises a vector comprising NOVX NA),
 CC identifying an agent that binds to NOVX, identifying a potential
 CC therapeutic agent for use in the treatment of a pathology that is related
 CC to aberrant expression or physiological interactions of NOVX, screening
 CC for a modulator of activity of or latency or predisposition to a
 CC pathology associated with NOVX, modulating the activity of NOVX, treating
 CC or preventing a pathology associated with NOVX, treating a pathological
 CC state in a mammal, a vector comprising the NOVX nucleic acid molecule, a
 CC cell comprising the vector, an antibody that immunospecifically binds to
 CC NOVX, determining the presence or amount of NOVX or the nucleic acid
 CC molecule in a sample, and determining the presence of or predisposition
 CC to a disease associated with altered levels of expression of NOVX or the
 CC nucleic acid molecule in a first mammalian subject. The methods and
 CC compositions of the present invention are useful for the diagnosis and
 CC treatment of disorders associated with aberrant expression or activity of
 CC the NOVX polypeptide, such as cancer, diabetes, obesity, and endocrine,
 CC CNS and inflammatory disorders. They can also be used in various
 CC detection and screening assays, chromosome mapping, tissue typing, gene
 CC therapy and predictive medicine. The present sequence is an RTQ (real
 CC time quantitative) PCR primer for an mRNA encoding a NOVX protein.

XX Reducing non-specific hybridisation - by using non-natural nucleotide
XX units in hybridisation assays, aptamers or anti-sense molecules.
XX Example 5; Page 43; 67pp; English.
XX This sequence represents a probe oligonucleotide used in a nucleic acid
XX hybridisation assay. The invention relates to an improvement in a nucleic
XX acid (NA) hybridisation assay for detecting a NA analyte in a sample
XX using assay components each of which comprises at least 1 hybridising
XX oligonucleotide (ON) segment, the improvement comprises incorporating
XX into at least 1 hybridising ON segment a 1st nucleotidic unit which will
XX not effectively base pair with adenosine (A), thymidine (T), cytidine
XX (C), guanosine (G) or uridine (U) under conditions in which A-T and G-C
XX base pairs are formed. Preferably the first nucleotidic unit can form a
XX non-natural base pair is formed between isocytosine and isoguanosine. The
XX assay methods reduce nonspecific hybridisation to reduce background noise
XX and increase sensitivity and specificity in the detection and
XX quantitation of analytes. The aptamers and antisense molecules containing
XX them prepared using the non-natural nucleotidic units can also have
XX minimised nonspecific hybridisation when used, e.g. in therapy

XX expression of protein kinase A subunit R1a, used for inhibiting cancer
XX cell growth and treating cancers.
XX
XX PS Example 10; Page 17; 85pp; English.
XX
XX This sequence represents a example of a synthetic modified
XX oligonucleotide (ON) of the invention. The ONs are complementary to, and
XX capable of down-regulating the expression of nucleic acid encoding
XX protein kinase A (PKA) subunit R1a, the modified ON has from 15 to 30
XX nucleotides and is a hybrid, inverted hybrid, or inverted chimeric ON,
XX the hybrid ON comprising a region of at least 2 deoxyribonucleotides
XX flanked by 3' and 5' flanking ribonucleotide regions each having at least
XX 4 ribonucleotides, the inverted hybrid ON comprising a region of at least
XX 4 ribonucleotide regions flanked by 3' and 5' flanking ribonucleotide
XX regions of at least 2 deoxyribonucleotides, and the inverted chimeric ON
XX comprising an ON nonionic region of at least 4 nucleotides flanked by 2
XX ON phosphorothioate regions. The ONs down-regulate the expression of the
XX PKA R1a gene while producing fewer side effects than conventional ONs,
XX e.g. reduced mitogenicity, reduced activation of complement and reduced
XX antithrombotic properties, relative to conventional ONs. They can be used
XX for inhibiting the growth of cancer cells and for treating cancers or
XX uncontrolled cell proliferation in humans

PT Inhibiting proliferation of cancer cells comprises administering a
PT synthetic, modified oligonucleotide, and an antibody that binds to
PT epidermal growth factor receptor or a cytotoxic agent.
XX
PS Example 10; SEQ ID NO 5; 46pp; English.
XX
CC The invention describes a method of inhibiting proliferation of cancer
CC cells comprising administering a synthetic, modified oligonucleotide (I)
CC to the cells, where the oligonucleotide is complementary to and capable
CC of down-regulating the expression of nucleic acid encoding protein kinase
CC A subunit Rialpha and then administering an antibody (II) that binds to
CC epidermal growth factor receptor (EGFR) or a cytotoxic agent (III). The

CC method is used to inhibit the proliferation of cancer cells. (I), (II)
 CC And (III) are used in a pharmaceutical composition for treating cancer in
 CC an afflicted individual. (I) demonstrate reduced mitogenicity, reduced
 CC activation of complement and reduced antithrombic properties, relative to
 CC conventional oligonucleotides. This sequence represents an
 CC oligonucleotide associated with down-regulation of protein kinase A
 CC subunit R1alpha expression.

 PT Reporter construct, useful for identifying potential therapeutic oligo-
 PT or poly-nucleotides, comprises target nucleic acid inserted 3' to a
 PT reporter element.
 XX

Example 4; Page 7; 22pp; English.

CC The invention relates to a reporter construct (RC) comprises a reporter
 CC element (RE) and a target nucleic acid, inserted 3' to RE, in the
 CC untranslated region. RC are used to identify, particularly in screening
 CC assays, oligo- or poly-nucleotides that modulate expression of a target
 CC sequence, particularly antisense sequences and ribozymes, potentially
 CC useful as pharmaceuticals. RC provide (a) effective analysis of
 CC biological activity of many test sequences against specific targets; (b)
 CC monitoring of mRNA levels without the cost and extensive pipetting
 CC required in reverse transcription PCR; and (c) use of high-throughput,
 CC microtitre well formats for screening, with the reaction (light emission)
 CC read directly from the wells, with exactly the same conditions for each
 CC well (no need for a set of probes as in e.g. the Tagman assay). The
 CC method is especially useful for screening primary cells (or other cells
 CC that are difficult to obtain) or where target mRNA is expressed at very
 CC low levels. The present sequence is used in the exemplification of the
 CC present invention.

PT protein kinase genes.
PT
XX
XX Example 3; SEQ ID NO 410; 164pp; English.
XX
XX The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of a mitogen-activated protein kinase
CC (MAPK) genes by RNA interference. Also described: (1) a method for
CC modulating expression of MAPK genes in cells, tissue explants or
CC organisms by introduction of siNA; (2) kits for in vitro or in vivo
CC delivery of siNA; (3) conjugates and/or complexes of siNA; and (4)
CC vectors that express siNA and cells containing these vectors. MAPK siNAs
CC have cytostatic, anorectic, antidiabetic, antiinflammatory,
CC antiasthmatic, immunosuppressive, antibacterial, antirheumatic,
CC antiarthritic, antipsoriatic and gastrointestinal activities. The MAPK
CC siNAs can be used to modulate the expression of MAPK genes, in cells,
CC tissue explants or organisms, e.g. for treating obesity; diabetes types I
CC and II; a wide range of tumours, and inflammatory diseases (asthma,
CC septic shock, rheumatoid arthritis, psoriasis and inflammatory bowel
CC disease). They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents a MAPK siNA which is used
CC in the exemplification of the present invention.

XX
CC The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiquinone. A composition of the invention
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antiinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiquinone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.

 DR
 XX Pharmaceutical composition for treating asthma, has antisense
 PT oligonucleotide containing less percentage of adenosine, targeted to
 PT nucleic acids associated with lung airway or lung dysfunction, and
 PT bronchodilating agent.
 XX
 PS Claim 15; SEQ ID NO 837; 763pp; English.
 XX This invention describes a novel composition (a) a first active agent,
 CC comprising oligonucleotides, effective for alleviating
 CC bronchoconstriction, respiratory tract inflammation, allergies and
 CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
 CC surfactant depletion or hyposecretion, when administered to a mammal. The
 CC oligonucleotides are derived from a gene encoding or regulating or lung
 CC expression of a target polypeptide associated with lung airway or lung
 CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
 CC The invention also describes a kit, that comprises: (a) a delivery
 CC device, in separate containers, (b) the oligonucleotides, (c)
 CC instructions for adding a carrier and for use of the kit. The composition
 CC of the invention has anti-allergic, anti-inflammatory, antiasthmatic,
 CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
 CC beta-adrenergic agonist. The composition is useful for preventing or
 CC treating a respiratory, lung or malignant disease. The administered
 CC composition comprises oligo and is administered to reduce the production
 CC or availability, or to increase the degradation of the target mRNA or to
 CC reduce the amount of target polypeptide present in the lungs. The
 CC pulmonary obstruction, and/or bronchoconstriction and/or lung
 CC inflammation, allergies and/or surfactant hypoproduction are associated
 CC with a disease or condition such as pulmonary vasoconstriction,
 CC inflammation, allergies, asthma, impeded respiration, respiratory
 CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
 CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
 CC transplantation rejection, pulmonary infections, bronchitis or cancer.
 CC The reduced adenosine content of the anti-sense oligos corresponding to
 CC thymidines present in the target RNA serves to prevent the breakdown of
 CC the oligonucleotides into products that free adenosine into the system
 CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
 CC prevent any unwanted effects due to it

 XX Inhibition of neutrophil chemoattractant production, inhibition of
 PT polymorphonuclear cell accumulation or reduction/treatment of
 PT inflammation using compounds comprising the peptide sequence HFRW.
 PT
 XX Disclosure; Page 8; 20pp; English.
 XX
 CC The invention relates to the use of a compound comprising an amino acid
 CC sequence His-Phe-Arg-Tip (HFRW) in the manufacture of a medicament and/or
 CC an agonist of melanocortin receptor type 3 (MC3-R) where the compound is
 CC not adrenocorticotrophic hormone (ACTH)1-39. The compounds are used to
 CC inhibit neutrophil chemoattractant production, polymorphonuclear cell
 CC (PMN) accumulation or reduction/treatment of inflammation. Especially,

CC these compounds are agonists of the MC3-R. The inflammatory response/
 CC disease is selected from gout, gouty arthritis, rheumatoid arthritis,
 CC asthma, reperfusion injury or damage, stroke, myocardial infarction,
 CC septic shock, or a skin disorder. Sequences AAZ57073-80 represent PCR
 CC primers used for amplifying murine melanocortin receptors

 PT Detecting psychrotolerance and mesophilia in Bacillus, from presence of
 PT signature sequences in ribosomal nucleic acid, for identifying food-
 PT spoilage strains.
 XX
 PS Example; Page 3; 6pp; German.
 XX
 CC This invention describes a novel method for determining psychrotolerance
 CC and mesophilia in Bacillus by using, as indicator, signature bases to
 CC present in ribosomal (deoxy)ribonucleic acids. The method is used to
 CC identify psychrotolerant strains, i.e. those that survive pasteurization
 CC as endospores and germinate and grow subsequently, even during cold
 CC storage, with production of lytic enzymes and toxins, resulting in
 CC spoilage of foods. This method allows rapid differentiation between
 CC psychrotolerant strains and mesophilic strains (which do not grow during
 CC cold storage), typically in 2 hr, compared with 14 days required for the
 CC conventional growth test. AAZ43561-243564 represent PCR primers used in
 CC the method of the invention

XX New isolated chimeric receptor comprising a DNA binding domain and/or
XX ligand binding domain of a new estrogen receptor, for identifying
XX functional ligands or hormonal analogs for the receptor.
XX Example A; Page 8; 35pp; English.
XX The sequences given in AAI71219-43 are primers which were used in the
XX amplification and cloning of a novel estrogen receptor (ER). The gene
XX encoding this new ER is located on chromosome 14 and has a different
XX tissue distribution from classical ER. This ER also has two orphan ER's,
XX ER-alpha and ER-beta. These orphan receptors have estrogen receptor
XX related structure but do not appear to be able to bind estradiol or other ER
XX ligands. The DNA binding domain (DBD) and ligand binding domain (LBD)
XX from this ER may be used in the chimeric receptor of the invention which
XX also has an N-terminal domain. The chimeric receptor, or DNA encoding it,
XX is useful in a screening assay for identification of new drugs. Similar
XX chimeric receptors comprising the LBD of the new ER, and also comprising
XX the DBD and an N-terminal domain derived from another nuclear receptor
XX e.g., progesterone receptor, are useful for the screening of compounds to
XX identify new ligands or hormone analogs which are able to activate the
XX new ER. Chimeric receptors comprising a DBD of the new ER, and LBD and an
XX N-terminal domain derived from another nuclear receptor, can be used to
XX identify new ligands or hormone analogs for the nuclear receptors

XX New antisense oligonucleotides targeted to a nucleic acid encoding E2F
XX transcription factor 2, useful for treating a disease or condition
XX associated with E2F transcription factor 2, e.g. hyperproliferative
XX disorders, such as cancer.
XX Claim 3; Page 92; 120pp; English.
XX The present invention relates to antisense oligonucleotides, compounds
XX and methods for modulating the expression of E2F transcription factor 2.
XX The antisense oligonucleotides specifically hybridise with and inhibit
XX the expression of E2F transcription factor 2. They are useful for
XX inhibiting the expression of E2F transcription factor 2 and for treating
XX diseases or conditions associated with E2F transcription factor 2, such
XX as hyperproliferative disorders, particularly cancer and developmental
XX disorders. They may also be used as research reagents and diagnostics, to
XX distinguish between functions of various members of a biological pathway
XX and in the treatment of a disease or disorder which can be treated by
XX modulating the expression of E2F transcription factor 2. The oligomeric
XX compounds, particularly the antisense oligonucleotides may be used to
XX modulate the function of nucleic acid molecules encoding E2F
XX transcription factor 2, ultimately modulating the amount of E2F
XX transcription factor produced. Sequences of the invention are also used
XX in antisense therapy. The present DNA sequence is human E2F transcription
XX factor 2 antisense oligonucleotide with a phosphorothioate backbone. This
XX sequence is targeted to the coding region of human E2F transcription
XX factor 2

PT Designing capture oligonucleotide probes for use on a support to which
PT complementary oligonucleotides hybridize with little mismatch.
XX
PS Example 5; Fig 29; 300pp; English.
XX
CC The present invention describes a method (M1) for designing capture
CC oligonucleotide probes (I) for use on a support to which complementary
CC oligonucleotide probes (II) will hybridise with little mismatch, where
CC (I) have melting temperatures within a narrow range. The method is useful
CC for detecting infectious diseases caused by bacterial infectious agents
CC e.g. Salmonella, Listeria monocytogenes and Haemophilus influenza, fungal
CC infectious agents e.g. Cryptococcus neoformans, Candida albicans and
CC Aspergillus fumigatus, viruses e.g. T-cell lymphocytotropic virus,
CC Epstein-Barr virus and polio virus, and parasitic infectious agents
CC selected from Onchocerca volvulus, Entamoeba histolytica and Dracunculus
CC medinensis. The method is also useful for detecting genetic diseases such
CC as 21 hydroxylase deficiency, Turner Syndrome and obesity defects.
CC Detecting cancer involving oncogenes, tumour suppressor genes, or genes
CC involved in DNA amplification, replication, recombination or repair, the
CC cancer is specifically associated with a gene selected from BRCA1 gene,
CC p53 gene, human papillomavirus types 16 and 18 and liver cancers. The
CC method is also used for environmental monitoring, forensics and the food
CC and feed industry, detecting comprises scanning (using e.g. a scanning
CC electron microscope and infrared microscope) the support at the
CC particular sites and identifying if ligation of the oligonucleotide probe
CC sets occurred and correlating (using a computer) identified ligation to a
CC presence or absence of the target nucleotide sequences. ABI82074 to
CC ABI97546 represent oligonucleotide sequences used in the exemplification
CC of the present invention

XX
XX New polynucleotides and polypeptides for predicting the activity of
PT compounds that interact with protein tyrosine kinases and/or protein
PT tyrosine kinase pathways.
XX
XX Example 2; SEQ ID NO 441; 139pp; English.
XX
XX The present invention describes a predictor set comprising a plurality of
CC polynucleotides or polypeptides whose expression pattern is predictive of
CC the response of cells to treatment with a compound that modulates protein
CC tyrosine kinase activity or members of the protein tyrosine kinase
CC pathway. Also described: (1) predicting whether a compound is capable of
CC modulating the activity of cells, comprising obtaining a sample of cells,
CC determining whether the cells express a plurality of markers, and
CC correlating the expression of the markers to the compound's ability to
CC modulate the activity of the cells; (2) a plurality of cell lines for
CC identifying polynucleotides and polypeptides whose expression levels
CC correlate with compound sensitivity or resistance of cells associated
CC with a disease state; and (3) identifying polynucleotides and
CC polypeptides that predict compound sensitivity or resistance of cells
CC associated with a disease state, comprising subjecting the plurality of
CC cell lines to one or more compounds, analysing the expression pattern of
CC a microarray of polynucleotides or polypeptides, and selecting
CC polynucleotides or polypeptides that predict the sensitivity or
CC resistance of cells associated with a disease state by using the
CC expression pattern of the microarray. The polynucleotides and
CC polypeptides have cytostatic activities, and can be used in gene therapy.
CC The polynucleotides and polypeptides are useful in predicting the
CC activity of compounds that interact with protein tyrosine kinases and/or
CC protein tyrosine kinase pathways. These may be used in determining drug
CC sensitivity in patients to allow the development of individualized
CC genetic profiles which aid in treating diseases and disorders (e.g.
CC cancer) based on patient response at a molecular level. The present
CC sequence is used in the exemplification of the present invention.

XX
CC The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiquinone. A composition of the invention
CC has antiinflammatory, anti-allergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antiinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiquinone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.

DR Identification of microorganism in biological sample, by determining
PT sequence of region of preset nucleotides in predetermined site in gene of
PT microorganism to obtain signature sequence and analyzing sequencing
PT information.
XX
PS Disclosure; SEQ ID NO 7; 78pp; English.
XX
CC The invention relates to a novel method for identifying a microorganism
CC in a sample, comprising determining the sequence of a region of up to 50
CC nucleotides in a predetermined site (PS) in a gene of a microorganism, to
CC obtain a signature sequence (SS), and analysing sequencing information in
CC SS. The sequence is determined by detecting the nucleotides incorporated
CC in a primer extension reaction performed using a primer binding at a PS
CC in a gene. The method is useful for identifying a microorganism such as
CC bacteria, fungi, algae or protozoa in a sample such as samples of
CC cellular or tissue material, body fluids like blood, saliva, urine or
CC semen and microbial isolates or cultures, water, food samples and soil.
CC The method allows pathogenic microorganisms to be distinguished from
CC commonals or saphorophytes in the same sample, permits molecular
CC identification of microorganisms and therefore genotypic is achieved. The
CC method enables high capacity and convenient procedure for screening large
CC numbers of samples. The present sequence is used in the exemplification
CC of the invention.

XX	
CC	This invention describes a novel composition (a) a first active agent,
CC	comprising oligonucleotides, effective for alleviating
CC	bronchoconstriction, respiratory tract inflammation, allergies and
CC	reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC	surfactant depletion or hyposecretion, when administered to a mammal. The
CC	oligonucleotides are derived from a gene encoding or regulating
CC	expression of a target polypeptide associated with lung airway or lung
CC	dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC	The invention also describes a kit, that comprises: (a) a delivery
CC	device, in separate containers, (b) the oligonucleotides, (c)
CC	instructions for adding a carrier and for use of the kit. The composition
CC	of the invention has anti-allergic, anti-inflammatory, antiasthmatic,
CC	analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC	beta-adrenergic agonist. The composition is useful for preventing or
CC	treating a respiratory, lung or malignant disease. The administered
CC	composition comprises oligo and is administered to reduce the production
CC	or availability, or to increase the degradation of the target mRNA or to
CC	reduce the amount of target polypeptide present in the lungs. The
CC	pulmonary obstruction, and/or bronchoconstriction and/or lung
CC	inflammation, allergies and/or surfactant hypoproduction are associated
CC	with a disease or condition such as pulmonary vasoconstriction,
CC	inflammation, allergies, asthma, impeded respiration, respiratory
CC	distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC	hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC	transplantation rejection, pulmonary infections, bronchitis or cancer.
CC	The reduced adenosine content of the anti-sense oligos corresponding to
CC	thymidines present in the target RNA serves to prevent the breakdown of
CC	the oligonucleotides into products that free adenosine into the system
CC	e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC	prevent any unwanted effects due to it

XX
XX Example 16; SEQ ID NO 122; 155pp; English.
XX
XX The invention relates to an antisense oligonucleotide comprising 8-80
CC nucleobases in length targeted to the coding region of a nucleic acid
CC molecule encoding PPAR-delta (peroxisome proliferative activated receptor
CC delta), where the antisense compound inhibits the expression of the PPAR-
CC delta and has any of the 66 sequences of 20 amino acids fully defined in
CC the specification. Also included are a compound of 8-80 nucleobases in
CC length that specifically hybridizes with at least an 8-nucleobase portion
CC of a preferred target region on a nucleic acid molecule encoding PPAR-
CC delta and a composition comprising the antisense oligonucleotide and a
CC carrier. The antisense oligonucleotide comprises at least one modified
CC internucleoside linkage (preferably a phosphorothioate linkage), at least
CC one sugar moiety (preferably 2'-O-methoxyethyl moiety) and at least one
CC modified nucleobase (which is a 5-methyl cytosine). The antisense
CC compounds are useful for treating cancer, osteoporosis, diabetes or
CC various endocrine disorders. The Human PPAR delta gene is located on
CC chromosome 6p21. The present sequence is a mouse PPAR delta cDNA target
CC sequence for the antisense oligonucleotides of the invention.

CC internucleoside linkage (preferably a phosphorothioate linkage), at least
CC one sugar moiety (preferably 2'-O-methoxyethyl moiety) and at least one
CC modified nucleobase (which is a 5-methyl cytosine). The antisense
CC compounds are useful for treating cancer, osteoporosis, diabetes or
CC various endocrine disorders. The Human PPAR delta gene is located on
CC chromosome 6p21. The present sequence is an antisense oligonucleotide of
CC the invention targeting mouse PPAR delta.

 DR
 XX Novel single or multiple target oligonucleotide anti-sense to e.g.
 PT initiation codons and introns of respiratory disease-relevant genes e.g.,
 PT CCR1, RANTES, MCP4, useful for prophylaxis or treating respiratory
 PT disease e.g., asthma.
 XX
 PS Claim 2; SEQ ID NO 1815; 85pp; English.
 XX
 CC The present invention relates to an oligonucleotide anti-sense to e.g.,
 CC initiation codon, coding region with 2-10 nucleotides of 5'-end and 3'-
 CC end of nucleic acid target comprising gene(s) chosen from e.g.
 CC interleukin (IL)-4 receptor, IL-5 receptor or salts of the
 CC oligonucleotide and optionally surfactant operatively linked to the
 CC oligonucleotide. The method is useful for preventing or treating a
 CC respiratory or lung disease, which involves administering to the airways
 CC of a subject an effective amount of an inhibitor. The oligonucleotide is
 CC useful for production of a medicament for the prevention and/or treatment
 CC of a respiratory or lung disease. The respiratory or lung disease is
 CC chosen from airway inflammation, allergy(ies), asthma, impeded
 CC respiration, cystic fibrosis (CF), chronic obstructive pulmonary diseases
 CC (COPD), allergic rhinitis (AR), acute respiratory distress syndrome
 CC (ARDS), pulmonary hypertension, lung inflammation, bronchitis, airway
 CC obstruction. The present sequence represents an oligonucleotide of the
 CC invention.

 XX New antisense oligonucleotide, having a sequence targeted to a nucleic
 PT acid encoding PPAR-delta, useful for preparing a composition for treating
 PT hyperproliferative disorder, e.g., cancer.
 XX
 PS Example 16; SEQ ID NO 122; Opp; English.
 XX
 CC This invention describes novel antisense oligonucleotides targeted to a
 CC nucleic acid encoding PPAR-delta, which specifically hybridise to and
 CC inhibit expression of PPAR-delta. The oligonucleotide specifically
 CC hybridises with at least an 8-nucleobase portion of an active site on the
 CC nucleic acid molecule encoding the PPAR-delta and comprises at least one
 CC modified internucleoside linkage, which is a phosphorothioate linkage, at
 CC least one modified sugar moiety, which is a 2'-O-methoxyethyl sugar
 CC moiety or at least one modified nucleobase, which is a 5-methylcytosine.
 CC The antisense oligonucleotides are useful for preparing a composition for
 CC treating hyperproliferative disorders, e.g., cancer. The oligonucleotides
 CC of the invention have cytostatic activity and can be used for gene
 CC therapy.

 XX Novel single or multiple target oligonucleotide anti-sense to e.g.
 PT initiation codon, intron of respiratory disease-relevant gene e.g. CCR1,
 PT RANTES, MCP4, useful for prophylaxis or treating respiratory disease e.g.
 PT asthma.
 XX
 XX Claim 2; SEQ ID NO 1815; 174pp; English.
 PS
 XX The invention relates to oligonucleotides anti-sense to an initiation
 CC codon, coding region, 5' or 3' intron-exon junction, intron or region
 CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
 CC chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)-
 CC -5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,
 CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
 CC also relates to a method of screening a candidate compound that binds to
 CC one or more nucleic acid target(s) or expressed product(s), for the
 CC prevention and/or treatment of a respiratory or lung disease. The
 CC oligonucleotides are useful for reducing or inhibiting expression of a
 CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
 CC CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
 CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
 CC useful for preventing or treating a respiratory or lung disease. The
 CC respiratory or lung disease is associated with hyper-responsiveness to
 CC and/or increased levels of, adenosine and/or levels of adenosine A
 CC receptor(s), and/or asthma and/or lung allergies associated with
 CC inflammation or an inflammatory disease. The respiratory or lung disease
 CC is chosen from airway inflammation, allergy, asthma, impeded respiration,
 CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
 CC allergic rhinitis, acute respiratory distress syndrome, pulmonary
 CC hypertension, lung inflammation, bronchitis, airway obstruction or
 CC bronchoconstriction. This sequence represents an oligonucleotide of the
 CC invention.

 PT (GFAT), for treating diabetes, a cardiovascular or neurologic disorder,
 PT ischemia/reperfusion injury.
 XX
 PS Claim 4; SEQ ID NO 2714; 175pp; English.
 XX
 CC The present invention relates to a compound which specifically hybridizes
 CC with a nucleic acid molecule encoding GFAT, and inhibits the expression
 CC of GFAT. Specifically claimed are antisense oligonucleotides capable of
 CC modulating the expression of GFAT, and which comprise any of the 3063
 CC sequences of 20 base pairs, given in the specification. The compound,
 CC composition and methods are useful for treating a disease or condition
 CC associated with GFAT, such as a disease or condition, e.g. diabetes, a
 CC cardiovascular or neurological disorder, ischemia/reperfusion injury.
 CC They are also useful in research and diagnostics for modulating the
 CC expression of GFAT. The present sequence represents a chimeric
 CC phosphorothioate oligonucleotide with 2'-MOE wings and a deoxy gap, these
 CC oligonucleotides inhibit human GFAT expression.

 PT
 PT Detection of necrosis factor-kappa B related medical condition in
 PT organism, by obtaining sample from the organism, and analyzing the sample
 PT for alteration in specified amino acid sequences.
 XX
 XX Claim 4; Fig 5; 44pp; English.
 CC
 CC The invention relates to a nuclear factor-kappa B (NF-kappa B) related
 CC medical condition in an organism being detected by obtaining a sample
 CC from the organism, and analysing the sample for an alteration in a the
 CC nuclear factor kappaB essential modifier (NEMO) gene or protein sequence
 CC (neither shown in the specification). The alteration results in
 CC inactivation of NF-kappa B. Also included are treating or preventing NF-
 CC kappa B related medical condition in an organism by administering the
 CC NEMO protein to the organism and screening a test organism for a compound
 CC for the treatment of NF-kappa B related medical condition (by
 CC administering the compound to the organism, and assaying for an
 CC improvement in the NF-kappa B related medical condition). The method
 CC useful is for detecting NF-kappa B related condition, e.g. incontinentia
 CC pigmenti (IP), apoptosis-related disease, immune-system related disease,
 CC blood vessel-related disease, skin defect, dental defect, osteopetrosis,
 CC ophthalmologic defect, or neurological defect, in an organism, i.e. human
 CC including affected individual, carrier individual, or noncarrier
 CC individual. The NEMO gene is located on chromosome Xq28, incontinentia
 CC pigmenti being an X-linked disorder. Experiments in this study show
 CC variations in exon 2, 10, 9 and particularly intron 3 to be linked to
 CC familial incontinentia pigmenti. The present sequence is a wild-type
 CC region of the human NEMO gene found to be associated with familial
 CC incontinentia pigmenti

XX
PS Claim 59; SEQ ID NO 4397; 317pp; English.
XX
CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC nucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human PKR
CC substrate sequence.

XX Novel enzymatic nucleic acid that down-regulates expression of neurite

PT growth inhibitor receptor, prostaglandin D2 receptor, ikappab kinase or

PT protein kinase PKR genes, for treating cancer and inflammatory disease.

XX
 PS Claim 59; SEQ ID NO 4360; 317pp; English.

XX The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 CC that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC ikappab kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human PKR
 CC substrate sequence.

 XX
 XX Disclosure; SEQ ID NO 7245; 214pp; English.
 PS
 XX The present invention describes a human genome-derived myosin-like
 XX protein 1 (hGDMPLP-1). The protein and polynucleotide sequences of hGDMPLP-
 CC 1 can be used in gene therapy and vaccine production. The hGDMPLP-1
 CC nucleic acids can be used as probes to detect, characterize and quantify
 CC hGDMPLP-1 nucleic acids in samples, as amplification substrates, to
 CC provide initial substrates for the recombinant engineering of hGDMPLP-1
 CC protein variants having desired phenotypic improvements, and for
 CC expressing the proteins. The hGDMPLP-1 proteins or polypeptides may be
 CC used as immunogens to raise antibodies that specifically recognize hGDMPLP-
 CC -1 proteins, as standards in assays used to determine the concentration
 CC of or amount specifically of hGDMPLP proteins, as specific biomolecule
 CC capture probes for surface-enhanced laser desorption ionisation, as
 CC therapeutic supplement in patients having specific deficiency in hGDMPLP-1
 CC production, and in vaccines or for replacement therapy. The
 CC polynucleotide sequences encoding hGDMPLP-1 may be used for diagnosing a
 CC disorder associated with the expression of hGDMPLP-1, in particular heart
 CC and skeletal muscle disorders. hGDMPLP-1 is localised to chromosome 22.

CC The present sequence represents an oligomer used in the screening of the
 CC hGDMPLP-1 sequence in the exemplification of the present invention. N.B.

XX PT New isolated nucleic acid, useful for treating viral diseases associated
 PT with tumors and cell degeneration, also related polypeptides, antibodies
 PT and transfected cells.

XX PS Disclosure; Page 269; 720pp; French.

CC The invention relates to a novel isolated 17 mer nucleic acid sequence,
 CC given in the specification, a sequence containing at least 15 consecutive
 CC nucleotides from the 17 mer sequence, a sequence with, after optimal
 CC alignment, at least 80 % identity to the 17 mer sequence, a sequence that
 CC hybridizes to them under highly stringent conditions, or the complement
 CC of any of them, or the corresponding RNA. The novel isolated nucleic
 CC acids of the invention are useful as probes and primers for detecting,
 CC identifying, quantifying and/or amplifying a nucleic acid, e.g. as one

CC component of a gene chip, in vitro as (anti)sense reagents, and for
 CC production of recombinant polypeptides. Any of the nucleic acids,
 CC polypeptides, vectors containing the nucleic acids, cells containing the
 CC vector or antibodies directed against the polypeptides are useful for
 CC preparation of pharmaceuticals for prevention and/or treatment of viral
 CC diseases that are characterised by development of tumours or cell
 CC degeneration, specifically cancer but also Alzheimer's disease and
 CC schizophrenia. Analysis of the expression of the 17 mer nucleic acids in
 CC patient samples is useful for diagnosis and/or prognosis of these
 CC diseases. The polypeptides can also be used to generate antibodies, and
 CC both the polypeptide and antibodies are useful as components of protein
 CC chips. The nucleic acid sequences of the invention can be used in gene
 CC therapy. This polynucleotide sequence represents a tumour suppression
 CC related human fukutin oligonucleotide of the invention

XX PT New nucleic acid encoding human prostate membrane-specific antigen,
 PT useful e.g. for treatment of tumors and viral infection, also related
 PT polypeptide and antibodies.

XX PS Disclosure; Page 704; 771pp; French.

CC The invention relates to the isolation of 6327 nucleotide sequences,
 CC fragments of at least 15 consecutive nucleotides of these nucleotides, a
 CC sequence having at least 80% identity, after optimal alignment, with the
 CC nucleotides, a sequence that hybridizes under stringent conditions with
 CC the nucleotides, or the complement, or corresponding RNA, of the
 CC nucleotides. The nucleotides are used as probes or primers for detecting,
 CC identifying, quantifying and/or amplifying nucleic acids, as in vitro
 CC sense and antisense sequences, of nucleotides involved in tumour
 CC suppression or reversion, apoptosis and or viral resistance, to produce
 CC recombinant polypeptides, and to prepare transgenic animals, as

CC experimental models. The nucleotides (also vectors containing them and
 CC cells containing the vectors), the encoded polypeptides and antibodies
 CC (Ab) against the polypeptide are useful for prevention and/or treatment
 CC of viral infections or diseases characterized by development of tumours
 CC or cell degeneration (e.g. Alzheimer's disease or schizophrenia).
 CC Analysis of the expression of the nucleotides can be used for diagnosis
 CC and/or prognosis of these diseases. The nucleotides and polypeptides can
 CC also be used to screen for their specific interactive molecules,
 CC potentially useful for treating diseases associated with abnormal
 CC expression of the nucleotides.

XX New isolated nucleic acid, useful for treating viral diseases associated
 PT with tumors and cell degeneration, also related polypeptides, antibodies
 PT and transfected cells.

XX Disclosure; SEQ ID NO 1790; 30pp; French.

XX This invention relates to novel isolated nucleic acid sequences involved
 CC in the phenomena of tumour suppression, tumour reversion, apoptosis
 CC and/or resistance to viruses. The invention may be useful for the
 CC development of compounds with a cytostatic, virucide, neuroprotective,
 CC neurotropic or neuroleptic activity. The DNA sequences may be useful as
 CC probes and primers for detecting, identifying, quantifying and/or
 CC amplifying nucleic acid, for example as one component of a gene chip, in
 CC vitro as antisense reagents and for production of recombinant
 CC polypeptides. The invention may therefore be useful for preparation of
 CC pharmaceuticals for prevention and/or treatment of viral diseases that
 CC are characterised by development of tumours or cell degeneration,
 CC specifically cancer but also Alzheimer's disease and schizophrenia. The
 CC present sequence is that of a nucleic acid sequence of the invention.
 CC Note: The sequence data for this patent did not form part of the printed

CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/publishedpct_sequences

XX Novel enzymatic nucleic acid that down-regulates expression of neurite
 PT growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
 PT protein kinase PKR genes, for treating cancer and inflammatory disease.

XX Claim 59; SEQ ID NO 2243; 317pp; English.

XX The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 CC that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a

CC target RNA in a cell. The present RNA sequence represents a human IKK-
 CC gamma substrate sequence.

 PT Novel myosin-like protein-1, useful for treating or preventing disorder
 PT associated with decreased expression or activity of human genome-derived
 PT myosin-like protein-1 such as disorder of heart and/or skeletal muscle
 PT function.
 XX
 PS Disclosure; SEQ ID NO 7245; Opp; English.
 XX
 CC The invention relates to a novel polypeptide (I) comprising a sequence

CC (S1) of myosin-like protein-1 (hGDMPLP-1) having 2568 amino acids fully
 CC defined in the specification, a fragment of at least 8 amino acids of
 CC (S1), 95% deviation from (S1) which are conservative substitutions, and
 CC 65% identity to (S1). A polypeptide of the invention acts as an agonist or
 CC antagonist of hGDMPLP-1, or as an inhibitor of hGDMPLP-1 activity. A
 CC pharmaceutical composition of the invention is useful for treating or
 CC preventing a disorder associated with decreased expression or activity of
 CC hGDMPLP-1, such as a disorder of heart and/or skeletal muscle function.
 CC The present sequence represents a 17-mer nucleotide, used in the
 CC invention for scanning the sequence represented in ACN63103

XX New single stranded oligonucleotides comprising a DNA domain having at
PT least one mismatch with respect to the genetic sequence of the
PT Huntington's disease gene to be altered, useful for treating or
PT preventing Huntington's disease.
XX
PS Example 7; Fig 20; 133pp; English.
XX
CC The present sequence is that of a portion of a mutated glutamine (CAG)
CC triplet repeat region of exon 1 of the human Huntington's disease (HD)
CC gene (see also AB281760). The triplet repeat region is mutated following
CC treatment with single-stranded phosphorothioate-containing HD gene-
CC targeted oligonucleotide HD3S/52 (see AB281756). The second glutamine
CC (CAG) repeat triplet is converted to CTG, creating a restriction fragment
CC length polymorphism site that enables cleavage by PvuII. HD3S/25 is an
CC example of oligonucleotides of the invention for targeted alteration of
CC the HD gene. Such oligonucleotides can be used for the treatment or
CC prevention of HD
